

FLAIM Trainer™

Technical Specifications

The world's first
immersive
technology
enabled firefighter
training solution

What is FLAIM Trainer?

FLAIM Trainer™ is a multi-sensory immersive learning system combining and integrating hardware and software to deliver a multi-sensory Firefighter training solution.

What's included?

The purchase of a single FLAIM Trainer System, FS-FT2, includes one year full hardware warranty, system licence and software subscription.

The software subscription gives access to the perpetual expanding and improving virtual environment library through quarterly updates that are available once product is registered and the licence is activated.

FLAIM's software updates, improvements and enhancements are developed to ensure the phasing of new technology and software enhancements that ensure you derive increasing value from your FLAIM Trainer investment including:-

Immersive representation realism, enhancing graphic realism, improved frame rates and fidelity, enhancing and increasing the range of virtual immersive learning environments, expanding the range of fire environments and improving and enhancing the fire, smoke, audio and extinguishing agent digitalisation.

What's included in the warranty?

The warranty covers full repair or replacement of all hardware faults resulting from a product defect on a back to supplier basis.

What are the options to extend the licence and warranty?

FLAIM offers extended licence subscription and warranty at the point of purchase on either a 3 or 5 year term.

FLAIM also offers the option to purchase licence and warranty annual extensions by purchasing FS-FT2-SU, however it is economically more beneficial to purchase the extended warranty at the initial point of purchase where a multi-year discount is applied.

FLAIM Trainer System

What's in the boxes?

FS-FT2

FLAIM Trainer V2 incl. 1yr Warranty, Licence and Software Subscription
