First On Scene

INITIAL FIRE SCENE SIZE-UP SERIES

Accurate size-up of the fire situation is crucial to the implementation of any strategic plan and its supporting tactics. Size-up starts with the receipt of the alarm and may be carried out many times and by many different individuals during the course of a fire.

The responsibility for size-up initially lies with the first officer on the scene, although all engine company members need to be able to make a personal size-up of the fire situation. As higher ranking officers arrive, the responsibility for size-up passes up the chain of command.

This series focuses on the initial size-up of an incident by *first on scene* personnel.

These represent a different style of interactive course than our usual didactic interactive online courses. They are interactive, scoreable, simulation courses.

- Each course in this series takes the student through the first critical minutes of the initial size-up of a fire scene relating to a particular building type.
- Students are presented with conditions and background information for an incident, shown a simulation of the incident including approach shots and a 360 of the building and then asked questions about their initial reports and actions relating to the incident.
- Four learning scenarios are presented per course. A fifth, testing scenario, serves as the final exam and is scored and tracked in the ATS Online Learning Management System.

Course Titles:

1. One Story Single Family Residence
2. Multi-Story Single Family Residence
3. Multi-Family Dwelling
4. Multi-Story Commercial
5. Strip Mall / Row Store
6. Light Industrial
7. Manufacturing Plant
